INTRODUCTION

In order for American Cylinder to maintain its position as one of the nation's leading manufacturers of pneumatic cylinders, it is essential that we consistently meet or exceed our customer's requirements.

This Quality Policy Manual defines the American Cylinder policies that reflect the American Cylinder Quality Objectives. Continuous implementation and improvement of this system ensures that we consistently meet the quality requirements of our customers in a timely and cost-effective manner.

American Cylinder has defined the procedures required to properly execute the policies contained within the Quality Policy Manual. These procedures either describe or implement the required activities, the sequence or interaction of events or activities, or instructions that describe the operating practice and control of process activities to ensure conformity of the product.

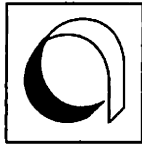

This quality policy manual serves several purposes, including:

- Providing a definition and description of our quality system.
- Defining the authorities and responsibilities of the personnel affected by the quality system.
- Providing general procedures for all activities comprising the quality system.
- Presenting our quality system to our customers, to inform them what specific controls are implemented to assure product quality, satisfying customer needs and provide a foundation for continuous improvement.
- Presenting our quality system to our suppliers so that they will better understand our company's expectations and requirements for incoming product.

We commit to the American Cylinder Quality Management System by defining **who** is responsible, **what** will be done and **what** is required to do it (resources), **how** it will be evaluated (measured) and **when** it will be in place (on an objective by objective basis). We fully support the provisions of this manual and solicit the active partnership of all American Cylinder's interested parties (personnel, customers, suppliers and regulatory bodies) in its implementation.
